Week 1
Day 3

Identify User Needs, Learning Gaps, and Functional Lab Requirements

User Needs

- A safe, controlled environment for hands-on cybersecurity practice.
- Practical experience with network security tools and techniques.
- Ability to capture, analyze, and investigate network activity.
- Experience identifying vulnerabilities and security risks.

Learning Gaps

- Limited hands-on experience with real network traffic.
- Limited experience performing vulnerability assessments.
- Need to connect cybersecurity theory with practical analysis.
- Need to develop skills in documenting and reporting security findings.

Functional Lab Requirements

- Network monitoring and traffic analysis.
- Packet capture and analysis using Wireshark.
- Reconnaissance and network enumeration.
- Vulnerability assessment of a controlled target.
- Controlled security testing and exploitation.
- Security analysis, documentation, and reporting.
